Availability of SEDD Data Elements by State in 1999-2004

The 1999-2004 HCUP Central Distributor SEDD databases are split into 3 files:

Core   Contains the data elements that are provided by most state Data Organizations which can be uniformly coded across states, and state-specific data elements that are available from a few state Data Organizations and usually retain state-specific coding.

Charges   Contains data elements related to detailed charge information.

AHA Linkage Contains hospital identifiers used by the data sources, the AHA, and by HCUP.

Because the Data Organizations decide which elements may be released on the HCUP Central Distributor databases, not all data elements will be available for all States.

The following table (page 2) shows:

- the location of each data element within the different SEDD files, and

- the availability of data elements across the individual States.

The first column specifies the data element. The next three columns identify the three types of SEDD files. The remaining columns refer to the states using the state postal code (e.g., ME for Maine, MD for Maryland). Cells marked with an "x" indicate that the data element is available for that file or state. Blank cells indicate that the data element is not available for that file or state. Not all HCUP data elements are available for all states. For information on how the HCUP data elements are defined, refer to the **Description of SEDD Data Elements** (on the SEDD Documentation CD-ROM).

When multiple data elements of the same type are available, the number of data elements available is specified in the state cell. For example, the state cell for diagnoses (i.e., DXn) identifies the number of available diagnoses. Massachusetts (MA) has 6 diagnosis fields on each record. Not all diagnoses are coded on all records.
